

Upgrade your Presetter

Is your presetter equipped for the End of Windows® 7?

KELCH

Pioneer for precision and efficiency

Why

Windows®7 support officially ended on January 14, 2020. Microsoft will no longer release updates or security patches, making it out of date and a critical vulnerability.

If your presetter is connected to your company network and you continue to use a Windows® 7 OS or older after support has ended, your KELCH presetter PC will still work, but it will become a security risk to your organization and may also in time develop problems interfacing to third party software programs.

Solution

As you now know, the long-term mechanical stability and precision of KELCH presetters is unrivalled on the market. This allows us to upgrade older presetters, long after similarly aged models from competitor suppliers have been rendered obsolete through deteriorating base body materials.

Act now and invest in the future of your KELCH tool presetters. We can upgrade your Trabant, Kalimat A/C/E, Sirius and Kenova set line models to ensure full support capability and spare parts availability for the coming years. All upgrades will be based on the latest Easy 10 software, with the additional optional service of migrating your existing presetter data to the new PC.

Note: Image shows full range of component upgrades available. Exact requirements will depend on age and specification of presetter.

1 Latest Easy 10 software, 24" monitor

2 New Windows® 10 Industrial PC

3

- New Firewire camera arm
- New Firewire camera
- Ring light
- LED illumination
- Optional: High-resolution camera

4

- Axis motor control, NMT upgrade
- USB counter box for pulse evaluation of axis signals

The benefit for you

- Modernisation of your stock
- Use of Smart Factory Services e.g. comprehensive networking with your existing systems
- Full support enabled by the upgrade
- Stable body of presetter is retained
- Extended life cycle
- Use of our latest technology

Patch holes in your system now, before they're exploited. Investing now will save money later.
